

Marbling Distance Explained

The total coverage of the marbling will vary from order to order. While we test the thickness and apply the same dipping distance from the rim, the flow can range from the top third to over two-thirds of the mug. This is perfectly normal and is a characteristic to be expected and celebrated! Here are some examples of what that can look like...

shorter
marbling
distance

farther
marbling
distance

NAVY WITH POWDER BLUE WHITE MARBLING

BURGUNDY WITH SAND MARBLING

MIDNIGHT WITH LILAC WHITE MARBLING
